Carestream Dental Announces CS SoftDent Cloud Practice Management Software at the California Dental Association—South Meeting

CS SoftDent is the Company's Third Software to Adopt a Cloud Platform

Anaheim, Calif. – Carestream Dental announced CS SoftDent Cloud practice management software at the California Dental Association—South Meeting (CDA—South), held May 15-17, at the Anaheim Convention Center in Anaheim, Calif. Also at the meeting, Carestream Dental showcased two of its other recently launched products, the CS 8100 3D extraoral imaging system and the RVG 6200 intraoral digital imaging system.

CS SoftDent Cloud, the latest cloud version of Carestream Dental's leading practice management software, is designed to help even the busiest practices run more efficiently, CS SoftDent Cloud will offer a full suite of practice management software tools to increase productivity and streamline daily workflow. CS SoftDent Cloud's features enable practices to effectively manage their day-to-day business, including insurance benefits tracking, electronic patient charts and detailed financial reports, at any time, from any location. Sensitive patient and practice management files are securely backed up and maintained by Carestream Dental in HIPAA-compliant storage.

"We know that our customers are very busy, so we're constantly looking for ways to improve their workflow," said Jeffrey Urkevich, CS SoftDent senior product line manager for Carestream Dental. "Now, practices can enjoy peace of mind because CS SoftDent Cloud stores all applications, data and patient information under one virtual roof, giving teams access to the files they need 24/7. Also, hardware overhead is greatly reduced, and offices can now access their data from both PC and Mac computers. It really is a great convenience."

Additionally, the CS 8100 3D and RVG 6200, launched at the American Association of Endodontists (AAE) 2014 Annual Session, are also available for sale. Building on the high-quality, 2D panoramic images available with the CS 8100, **the CS 8100 3D now offers 3D imaging and 3D model scanning in one affordable unit.** The system's 3D imaging technology captures images with 1:1 accuracy without distortion or overlap of anatomy. Selectable 3D programs give practitioners control of the image size, resolution and dose for each examination. These programs include a universal field of view (5 cm x 5 cm) for daily dental exams such as local pathology, single implant and endodontic examinations; single (8 cm x 5 cm) and dual jaw (8 cm x 9 cm) modes that can capture one or both dental arches in a single scan; a pediatric mode (4 cm x 4 cm) that is ideal for children and follow-up exams; and the EndoHD mode (5 cm x 5 cm), which delivers high-resolution scans with 75 µm precision to capture the smallest details of root and canal morphology.

The RVG 6200 is the company's newest addition to its robust portfolio of digital intraoral sensors. The new system continues in the RVG legacy and further shapes the technology around practitioners, offering an efficient three-step acquisition process: position, expose and view. Practitioners simply position the sensor in a patient's mouth, capture the image and the image appears within seconds, further streamlining workflow.

The RVG 6200's high-definition image resolution provides film-quality digital images for improved diagnosis. It also comes with a convenient dose indicator that identifies over- and under-exposures, so practitioners can quickly adjust the settings, reducing the need for retakes. Clinicians can optimize image contrast according to their diagnostic needs by using the endodontic, periodontic or dentin enamel junction (DEJ) filters. In addition to the anatomical modes, the RVG 6200's easy-to-use sharpness filter enables practitioners to customize the appearance of images to their preferred look and feel.

"We could not be happier with the addition of CS SoftDent Cloud, the CS 8100 3D and the RVG 6200 to our portfolio," said Dr. Ed Shellard, chief marketing officer and director of business development for Carestream Dental. "We're continually meeting and exceeding our goal of providing practitioners with products that simplify complicated tasks and enable them to do their jobs with fewer steps, and this is just the beginning."

CDA-South attendees are encouraged to visit Carestream Dental's **booth number 502** to demo CS SoftDent Cloud and learn more about the CS 8100 3D and RVG 6200. For more information on Carestream Dental's innovative solutions or to request a product demonstration, call 800.944.6365 or visit www.carestreamdental.com.

About Carestream Dental

Carestream Dental provides industry-leading imaging, CAD/CAM, software and practice management solutions for dental and oral health professionals. With more than 100 years of industry experience, Carestream Dental products are used by seven out of 10 practitioners globally and deliver more precise diagnoses, improved workflows and superior patient care. For more information or to contact a Carestream Dental representative, call 800.944.6365 or visit www.carestreamdental.com.

About Carestream Health

Carestream is a worldwide provider of dental and medical imaging systems and IT solutions; X-ray imaging systems for non-destructive testing and advanced materials for the precision films and electronics markets. For more information about the company's broad portfolio of products, solutions and services, please contact your Carestream representative, call 888.777.2072 or visit www.carestream.com.
