Digital Overview

Carestream Dental is proud to offer a full suite of digital imaging systems that are designed to integrate seamlessly with your industry-leading imaging and practice management software.

CS 1200
A high-quality entry point into digital imaging that combines both quality and affordability to create one exceptional camera that fits easily into any practice’s budget.

• 1024 (H) x 768 (V) still image resolution
• 4 LED illumination system
• 3mm-25mm focus range
• Supports USB, S-Video, and AV

CS 1500 Intraoral Camera
Available in both wired and wireless models, the CS 1500 intraoral camera combines both quality and affordability to create one exceptional camera that fits easily into any practice’s budget.

• 1024 (H) x 768 (V) still image resolution
• True autofocus, an automatic lighting system, and "Scan and detect" caries detection workflow
• Dual capture buttons ensure ease of use

CS 1600
Using exclusive Carestream Dental technology, the CS 1600 dual-modality intraoral camera makes caries screening and detection extremely simple.

• 1024 (H) x 768 (V) still image resolution
• 18 LED illumination system
• 3mm–infinity focus range
• "Scan and detect" caries detection workflow

CS 5100 System
Just transitioning to digital? The RVS 5100 Digital Radiography system may be the right option for you. An ideal compromise between image quality and price, the RVS 5100 System boasts a true resolution of 14 lp/mm to deliver the high-quality images you need to ensure confident and precise diagnoses.

CS 6500 Imaging
The RVS 6500 system provides the same exceptional image quality as the award-winning RVS 6100 system (>20 lp/mm), but with never-before-seen mobility and ease of use.

• Secure Wi-Fi technology promotes a cable-free work environment
• Comes in three sensor sizes—0, 1, and 2
• Rounded corners ensure maximum patient comfort
• Available with Logipix camera control software to enhance diagnostic abilities
• Acquire images directly from an iPad with exclusive RVS mobile-application

CS 7600 Imaging
High-quality digital panoramic images at a surprisingly affordable price.

• User-friendly interface makes image programming easy
• Face-to-face positioning keeps patients comfortable and minimizes errors
• High-frequency generator ensures radiation remains constant during the exposure

CS 8000 Digital Panoramic and Cephalometric System
A state-of-the-art hybrid digital panoramic system, upgradeable to focused-field 3D in one space-saving design.

• 3D images feature the industry’s highest resolution (1700 mm) at the lowest dose
• Available 3D stitching module combines up to 3 volumes for full-volume reconstruction
• High-frequency generator and variable focal trough ensure patient comfort and safety

CS 9000 and CS 9000C 3D System
Digital panoramic and cephalometric radiography with available focused-field 3D imaging.

• Captures high-quality cephalometric images in about a second
• User-friendly design facilitates proper positioning and reduces the risk of malays
• All the same features and options as 9000 system with one-shot cephalometric

CS 9300 and 930KC 3D System
Revolutionize your workflow with the all-in-one CS 9300 system. Combining true panoramic technology, one-shot cephalometric imaging, and adaptive 3D abilities, this extraordinary and features selectable fields of view ranging from 5 x 5 cm to 17 x 13.5 cm to cover the widest array of clinical applications in the market.

• Multiple 3D views include focused-field, standard, jaw, TMJ, sinus, and maxillofacial modes
• Industry-leading image quality and resolution
• Collimation limits radiation exposure
• Features-rich 3D software includes implant library and compatibility with Simplant, NobelGuide, and SureSmile

CS 2200 Intraoral X-Ray System
Performance of the previous generations plus improved design helps provide more accurate diagnosis and ease of use.

• Very high-frequency x-ray generator supports superior image quality and better safety conditions
• High image quality
• Minimizes radiation exposure

CS 6010 System
With true resolution greater than 20 lp/mm, the RVS-610 System continues the tradition of delivering the highest resolution of any digital radiography system in the industry.

• Rounded corners of sensor are more comfortable for patients
• Rear-entry cable helps with proper sensor placement to capture a range of images, including vertical bitewings
• Size-0 sensor for pediatric applications allows user to reduce exposure by as much as 40%
• Sensor remote control for convenient chairside activation

CS 8000C Digital Panoramic and Cephalometric System
Standard cephalometric exposures in "one shot."

• Images captured in just over a second
• Improved patient comfort
• Dual sensor design means no swapping sensors

CS 8000C and CS 9000C 3D System
Digital panoramic and cephalometric radiography with available focused-field 3D imaging.

• Captures high-quality cephalometric images in about a second
• User-friendly design facilitates proper positioning and reduces the risk of malays
• All the same features and options as 9000 system with one-shot cephalometric

CS 9000 and CS 9000C 3D System
A state-of-the-art hybrid digital panoramic system, upgradeable to focused-field 3D in one space-saving design.

• 3D images feature the industry’s highest resolution (1700 mm) at the lowest dose
• Available 3D stitching module combines up to 3 volumes for full-volume reconstruction
• High-frequency generator and variable focal trough ensure patient comfort and safety
