Congratulations on your purchase of the KODAK 8000 Digital Panoramic System. Thank you for your confidence in our products and we will do all in our power to ensure your complete satisfaction.

The User Guide for the KODAK 8000 Digital Panoramic System includes information on the Panoramic features. We recommend that you thoroughly familiarize yourself with this Guide in order to make the most effective use of your system.

WARNING: We recommend that you consult the “Safety, Regulatory and the Technical Specification User Guide” before using the KODAK 8000 Extraoral Imaging Systems.

The information contained in this Guide may be subject to modification without notice, justification or notification to the persons concerned.

About This Guide

Conventions in this Guide

The following special messages emphasize information or indicate potential risk to personnel or equipment:

WARNING
Warns you to avoid injury to yourself or others by following the safety instructions precisely.

CAUTION
Alerts you to a condition that might cause serious damage.

IMPORTANT
Alerts you to a condition that might cause problems.

NOTE
Emphasizes important information.

TIP
Provides extra information and hints.
Chapter 2
KODAK 8000 UNIT OVERVIEW

The KODAK 8000 digital panoramic unit is designed to carry out the following radiological examinations:

- Panoramic
- Maxillary Sinus
- Temporomandibular Joints (TMJ)

General Overview

The KODAK 8000 digital panoramic unit is composed of the following functional components:

- The unit head that contains all the electronic control
- The rotative arm
- Control panel
- The panoramic digital sensor
- The x-ray source assembly
- The x-ray remote control
- The chin rest and bite block
- The chin rest base
- The temple supports
- The hand grips
- The acquisition software (see “Imaging Software Overview”)

The following figures illustrate the general overview of the KODAK 8000 digital panoramic unit.

**IMPORTANT**
The patient entry can be positioned either on the right or the left side of the KODAK 8000 unit.
Mobile Components

Figure 2-1 illustrates the up and down movement of the KODAK 8000 digital panoramic unit mobile component and the rotation of the rotative arm. The patient entry can be positioned either on the right or the left side of the KODAK 8000 unit.
General Functional Components

Figure 2-2 illustrates the general functional components of the KODAK 8000 digital panoramic unit. The patient entry can be positioned either on the right or the left side of the KODAK 8000 unit.

**Figure 2-2  KODAK 8000 Unit Functional Components**

1. ON/OFF button
2. Chin rest and bite block
3. Temple supports
4. Temple supports control knob
5. Hand Grips
6. Control panel
7. Height adjustment buttons
8. Panoramic digital sensor
9. X-Ray source assembly
10. Collimator selector
11. Unit rotative arm
12. X-Ray remote control
13. PC hosting the imaging and the acquisition software
Digital Sensor Locations

Figure 2-3 illustrates the location of the digital panoramic sensor of the KODAK 8000 digital panoramic unit. The patient entry can be positioned either on the right or the left side of the KODAK 8000 unit.
Laser Locations

Figure 2-4 illustrates the location of the lasers of the KODAK 8000 digital panoramic unit. The patient entry can be positioned either on the right or the left side of the KODAK 8000 unit.

Figure 2–4  KODAK 8000 Unit Laser Beam Locations

1 Mid-sagittal plane positioning laser beam
2 Frankfort plane positioning laser beam
3 Canine plane positioning laser beam
Control Panel

The control panel is an alphanumeric, digital soft touch console. It allows the operator to control certain unit functions. It also displays the operating parameters and error messages.

Figure 2–5  Unit Control Panel

1  X-Ray emission LED: Yellow, indicates the x-rays are being emitted.

2  Display Screen: Displays the current acquisition parameters and the error messages.

3  Reset button: Resets the unit arm to the initial position to enable the patient to enter and exit the unit.

4  Laser beam button: Activates the laser positioning beams to correctly position the patient.
X-Ray Remote Control Overview

The x-ray remote control enables you to launch a radiological image acquisition via the exposure button from outside the x-ray room. You must press and hold the exposure button until the end of acquisition. Premature release of the exposure button interrupts the acquisition.

Figure 2–6  X-Ray Remote Control

1  Exposure button: launches image acquisition.
Positioning Accessories and Replacement Parts

The following accessories are used when positioning a patient. They are delivered with the KODAK 8000 digital panoramic unit.

Table 2-1 lists the panoramic positioning accessories.

Chapter 3
IMAGING SOFTWARE OVERVIEW

Computer System Requirements

This section specifies the minimum computer system requirements for KODAK 8000 digital panoramic system software.

IMPORTANT
It is MANDATORY to check that the computer system configuration is compatible with the computer system requirements for the KODAK 8000 software. If necessary you MUST update your computer system configuration. KODAK 8000 MUST be connected to the computer via a point-to-point Ethernet link and not via a LAN. DO NOT place the PC and the peripheral equipment connected to it in the immediate vicinity of the patient in the unit. Leave at least 1.5 m distance from the unit. The computer and the peripheral equipment must conform to the IEC 60950 standard.

Table 3–1 Minimum PC System Requirements

<table>
<thead>
<tr>
<th>Item</th>
<th>System Requirements</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>1 GHz, 32 bits processor (Pentium or equivalent - Intel chipset)</td>
<td></td>
</tr>
<tr>
<td>RAM</td>
<td>256 MB (512 MB recommended)</td>
<td>The RAM has a major impact on system performance.</td>
</tr>
<tr>
<td>Hard disk drive</td>
<td>40 GB (80 GB recommended)</td>
<td>The Video RAM has major impact on system performance. KDIS requires a minimum disk space of 1.2 GB for installation</td>
</tr>
<tr>
<td>Ethernet interface</td>
<td>• 1 Ethernet interface (100 Mbits)</td>
<td>There must be 2 Ethernet interfaces if the PC is connected to a LAN and/or a WAN</td>
</tr>
<tr>
<td>Monitor</td>
<td>• 1 monitor</td>
<td></td>
</tr>
<tr>
<td>Operating system</td>
<td>• Windows 2000 SP4</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Windows XP Home / Pro edition SP2 with DirectX 9.0c or higher</td>
<td></td>

<tr>
<td></td>
<td>• Server 2003 or Windows Vista 32 bits</td>
<td></td>
</tr>
</tbody>
</table>

Your monitor is a vital component in displaying quality images. Low-quality screens will prevent you from proper diagnoses and treatment.
General Software Overview

The KODAK 8000 digital panoramic systems operates with the following software:

- KODAK dental imaging software
- Acquisition interface module

KODAK Dental Imaging Software

The KODAK dental imaging software is a user-friendly working interface that was designed and developed specifically for radiological diagnosis. It is the common imaging platform for all our digital systems for dentistry.

The KODAK dental imaging software has the following features:

- Patient record management using Patient Window features
- Extraoral and intraoral image management using Imaging Window features.

NOTE

For a complete information on the KODAK Dental Imaging Software, see the “KODAK Dental Imaging Software, Quick Start Guide”.

Acquisition Interface Module

The Panoramic Acquisition Window is the acquisition user-friendly interface that was designed and developed specifically for KODAK 8000 digital panoramic systems.

<table>

Acquisition Interface Module

Panoramic Acquisition Window Overview

The Panoramic Acquisition Window is the main panoramic interface with the KODAK 8000 digital panoramic system that provides you with imaging acquisition functions.

Figure 3–1  Panoramic Acquisition Window

1  Information button:
   - **About**: Identifies the Software and the Firmware versions
   - **Reset of the Values**: Resets to the manufacturing parameter settings

2  Preview Screen: Displays the acquired image in real time.

3  Selected Parameter Display: Displays the current acquisition parameter settings.

4  System Status Screen: Displays various alert or warning messages originating from the unit.

5  X-Rays ON / OFF button: Turns off the x-ray emissions to demonstrate the acquisition process for the patient.

6  Generator Cooling indicator: Indicates the automatic cooling time (mm:ss) required for the generator to reach 0 for a new acquisition.

7  Positioning laser button: Activates the laser positioning beams to correctly position the patient.

8  Reset button: Resets the rotative arm in the start position.
9  **Ready Indicator LED**
   - Green indicates the unit is ready to start acquisition.
   - Black indicates the unit is not ready to start acquisition.

10  **X-Ray Emission indicator:** Yellow, indicates the x-ray emission status.

11  **Exit button:** Closes the Acquisition Window.

12  **Selector Button:** Selects different acquisition setting options.
   - Click **Program** to select examination type options.
   - Click **Patient** to select patient type parameters.
   - Click **Parameters** to select exposure parameter options.

The **Selector button** enables you to access the following 3 panes:

- **Program pane:** Examination type options
- **Patient pane:** Patient type parameter options
- **Parameters pane:** Exposure parameter options
Panoramic Program Pane

The panoramic Program pane enables you to choose different radiological exams. The diagram in the panoramic Program pane represents a jaw, with the right side of the diagram corresponding to the right side of the patient. Click on a section of the jaw to select an anatomical zone for radiological exam. The selected segment is highlighted.

1 TMJ exam options:

Select for a TMJ x2.

Select for a TMJ x4 exam and click.

2 Radiological exam options:

Click for a Maxillary Sinus exam.

Click for an anterior exam.

Click for a Panoramic exam.

NOTE

The above list of exam types are only a sample of exam options of the Program pane.
Panoramic Patient Pane

The panoramic Patient pane enables you to choose different patient parameters. The selection of the patient parameters influences the quality of the image. The selected parameters must be based on the age and morphology of the patient.

Figure 3–3  Panoramic Patient Pane

1  Patient type parameters:

Click if the patient is adult.

Click if the patient is a child.

2  Patient size parameters:

Click if the patient is large.

Click if the patient is medium.

Click if the patient is small.
Panoramic Parameter Pane

The panoramic Parameter pane enables you to choose exposure parameters for the radiological image acquisition. If the default parameter setting is not adapted to your patient’s type, you can manually adapt the parameter settings to the patient’s type and save this setting as the default setting.

Figure 3–4 Panoramic Parameter Pane

1 Radiation dose options:
   - 60 kilovolt
   - 2.0 milliampere

2 Fine-tuning buttons:
   Click to fine-tune the kV and the mA.

3 Exposure time:
   9.6 seconds

4 Saving parameter button:
   Click to save the selected parameters.
Chapter 4
GETTING STARTED

Switching on the Unit

Before switching on the unit, check that:

- The installation of the unit is complete.
- The PC is switched on.

*IMPORTANT*

You must switch on the PC and wait for it to be ready for the connection before switching on the unit.

To switch on the unit, follow these steps:

1. On the unit column, press the **ON** button.
2. You must wait for a minute for the connection between the unit and the PC to be established. If you start the imaging software before the connection is established an error message is displayed. Click **OK**, close the imaging software and wait for the connection to be established.
3. You can now proceed to start the imaging software.

*IMPORTANT*

To increase the operating life of the x-ray tube, if the unit has not been used for a month, you must follow the following procedures before use.

1. In the **Panoramic Acquisition Window**, select the **Parameter pane**.
2. Select the following series of parameter settings:
   - 70 kV - 6.3 mA
   - 80 kV - 10 mA
   - 85 kV - 10 mA
3. Leave the x-ray room and close the door. For each parameter setting, from the x-ray remote control, press and hold the button to launch the x-ray. The unit is now ready to be used for acquisition.
Starting the Imaging Software

To start the imaging software, follow these steps:

1. On your desktop, double-click 🖥️.

OR

From your PC, click **Start > All Programs > Kodak > Kodak Dental Software.**

A blank **Patient Window** is displayed.

2. Create or open an existing patient record.

Creating a Patient Record

To create a patient record, follow these steps:

1. In the **Patient Window**, from the toolbar, click 🖼️.

OR

From the menu bar, select **Patient > New.**

2. Enter the required patient information. The **Last name**, the **First name** and the **Date of birth** fields are required.

3. From the menu bar, select **Picture > Insert Picture** to add a *.tif* or *.bmp picture of the patient to the record (optional). Select the picture from your directory and click **Open.**

4. Click **OK** to save. The patient record is automatically assigned a 7-digit number starting with a letter (for example, M0000001).

5. Click 📸 to access the **Imaging Window.**

6. Select an image acquisition.
Accessing the Acquisition Window

To access the Acquisition Windows, follow these steps:

1. In the Imaging Window, from the toolbar, click \( \) to access the Panoramic Acquisition Window.

2. See chapters “Acquiring Panoramic Images” to launch an acquisition.
Chapter 5
ACQUIRING PANORAMIC IMAGES

Acquiring a Panoramic Image
Before acquiring a panoramic image, check that you have:

- Reset the unit rotative arm to the start position for patient to enter the unit.
- Selected the patient record.
- Accessed the Imaging Window.
- Accessed the Panoramic Acquisition Window.

Preparing the Unit and Setting the Acquisition Parameters
To set the acquisition parameters, follow these steps:

1. On the x-ray source assembly, set the collimator selector to Panoramic.

2. In the Panoramic Acquisition Window, click the Program button to access the Program pane. Click on the section of the jaw to select the anatomical zone for the x-ray image.

3. Click the Patient button to access the Patient pane.
   Select the patient:
   - Type
   - Size

4. If the default parameter setting is not adapted to your patient type, click the Parameter button and in the Parameter pane select the appropriate parameters. To save the new parameter settings as the default settings, click MEM.

5. Position the appropriate chin rest on the chin rest support and cover the bite block with a hygienic barrier. If needed, use the edentulous bite block.
Preparing and Positioning the Patient

To prepare and position the patient, follow these steps:

1. Ask the patient to remove all metal objects.

2. Ask the patient to wear a lead apron. Ensure that the apron lays flat across the patient's shoulders.

3. Press and hold the height adjustment buttons to raise the chin rest to the maximum height. Ask the patient to enter the unit.

   **NOTE**
   If the patient is too tall, ask the patient to sit on a stool.

4. Ask the patient to do the following:
   - Stand up straight.
   - Grip the lower handle on each side.
   - Rest the chin on the chin rest support and bite into the bite block.
   - Position the feet slightly forward.
   - Relax the shoulders for full motion of the unit rotative arm.

   **NOTE**
   Correct posture reduces the shadow of the spinal column transferred to the image.
5. On the Control Panel, click ![image] to turn on the 3 positioning laser beams:
   - The mid-sagittal (1) plane positioning laser beam for a central alignment.
   - The Frankfort plane (2) positioning laser beam for a Frankfort plane alignment.
   - The canine plane (3) positioning laser for a canine alignment.

   **NOTE**
   You can re-activate the laser positioning beams as needed. You can press the same button to turn OFF the laser beams, or wait 60 seconds for the beams to turn OFF automatically.

6. Correctly align the Frankfort (2) and mid-sagittal (1) planes using the height adjustment buttons and the Frankfort laser adjusting knob. Ask the patient to smile to align the canine plane (3).

7. Immobilize the patient head with the temple supports (4).
8. Ask the patient to do the following:
   - To close the eyes
   - To remain still
   - To swallow
   - To place the tongue in contact with the palate
   - To breath through the nose

Launching the X-ray

To launch the x-ray, follow these steps:

1. Leave the x-ray room and close the door. You must keep visual contact with the patient during acquisition.

   **IMPORTANT**
   To stop the acquisition, if any problem, release the exposure button of the remote control or press the red emergency stop button.

2. Launch the x-ray with the remote control. Press and hold the exposure button until the end of acquisition. The 🟢 turns yellow, indicating x-ray emission. The image appears on the Preview Screen of the Panoramic Acquisition Window. When the acquisition ends, the Panoramic Acquisition Window disappears and the acquired image is automatically transferred to the Imaging Window.

3. Check the image quality.

4. Do the following when the acquisition is finished:
   - Open the temple supports and release the patient.
   - Remove the hygiene barrier of the bite block.
   - Reset the unit rotative arm for the next acquisition.
Acquiring a Sinus Image

Before acquiring a sinus image, check that you have:

- Reset the unit rotative arm to the start position for patient to enter the unit.
- Selected the patient record.
- Accessed the **Imaging Window**.
- Accessed the **Panoramic Acquisition Window**.

Preparing the Unit and Setting the Acquisition Parameters

To set the acquisition parameters, follow these steps:

1. On the x-ray source assembly, set the collimator selector to **Panoramic**.
2. In the **Panoramic Acquisition Window**, click the **Program** button to access the **Program pane**. Click on the section of the jaw to select the sinus.
3. Click the **Patient** button to access the **Patient pane**.
   
   Select the patient:
   
   - Type
   - Size
4. If the default parameter setting is not adapted to your patient type, click the **Parameter** button and in the **Parameter pane** select the appropriate parameters. To save the new parameter settings as the default settings, click.
5. Position **on the chin rest support.**

Preparing and Positioning the Patient

To prepare and position the patient, follow these steps:

1. Ask the patient to remove all metal objects.
2. Ask the patient to wear a lead apron. Ensure that the apron lays flat across the patient’s shoulders.
3. Press and hold the height adjustment buttons to raise the chin rest to the maximum height. Ask the patient to enter the unit.

**NOTE**
If the patient is too tall, ask the patient to sit on a stool.

4. Ask the patient to do the following:
   - Stand up straight.
   - Grip the lower handle on each side.
   - Rest the chin on the chin rest support.
   - Position the feet slightly forward.
   - Relax the shoulders for full motion of the unit rotative arm.

**NOTE**
Correct posture reduces the shadow of the spinal column transferred to the image.

5. On the **Control Panel**, click to turn on the 3 positioning laser beams:
   - The mid-sagittal plane positioning laser beam for a central alignment.
   - The Frankfort plane positioning laser beam for a Frankfort plane alignment (2).
   - The canine plane positioning laser for a canine alignment, coinciding with the outer corner of the eye (3).

6. Ask the patient to do the following:
   - To close the eyes
   - To remain still
   - To breath through the nose
Launching the X-ray

To launch the x-ray, follow these steps:

1. Leave the x-ray room and close the door. You must keep visual contact with the patient during acquisition.

   **IMPORTANT**
   To stop the acquisition, if any problem, release the exposure button of the remote control or press the red emergency stop button.

2. Launch the x-ray with the remote control. Press and hold the exposure button until the end of acquisition. The turns yellow, indicating x-ray emission. The image appears on the Preview Screen of the Panoramic Acquisition Window. When the acquisition ends, the Panoramic Acquisition Window disappears and the acquired image is automatically transferred to the Imaging Window.

3. Check the image quality.

4. Do the following when the acquisition is finished:
   - Open the temple supports and release the patient.
   - Clean the chin rest with a medical-grade 76% alcohol disinfectant for the next patient.
   - Reset the unit rotative arm for the next acquisition.
Acquiring a TMJ x2 and x4 Image

Before acquiring a TMJ x2 and/or x4 image, check that you have:

- Reset the unit rotative arm to the start position for patient to enter the unit.
- Selected the patient record.
- Accessed the Imaging Window.
- Accessed the Panoramic Acquisition Window.

Preparing the Unit and Setting the Acquisition Parameters

To set the acquisition parameters, follow these steps:

1. On the x-ray source assembly, set the collimator selector to Panoramic.
2. In the Panoramic Acquisition Window, click the Program button to access the Program pane. Click on the section of the jaw to select the TMJ x2 for an x-ray image.
3. Click the Patient button to access the Patient pane. Select the patient:
   - Type
   - Size
4. If the default parameter setting is not adapted to your patient type, click the Parameter button and in the Parameter pane select the appropriate parameters. To save the new parameter settings as the default settings, click .
5. Place on the chin rest support and position it at the central graduation.

Preparing and Positioning the Patient

To prepare and position the patient, follow these steps:

1. Ask the patient to remove all metal objects.
2. Ask the patient to wear a lead apron. Ensure that the apron lays flat across the patient’s shoulders.
3. Press and hold the height adjustment buttons to raise the chin rest to the patient’s height.
4. To acquire a TMJ x2 image, correctly position the patient using the 2 positioning laser beams.

![Diagram showing patient positioning](image)

**Launching the X-ray**

To launch the x-ray, follow these steps:

1. Ask the patient to remain still and close the eyes. Launch an x-ray to acquire an image with the mouth closed.

2. Leave the x-ray room and close the door. You must keep visual contact with the patient during acquisition.

   ![Important](image)

   **IMPORTANT**

   To stop the acquisition, if any problem, release the exposure button of the remote control or press the red emergency stop button.

3. Launch the x-ray with the remote control. Press and hold the exposure button until the end of acquisition. The turns yellow, indicating x-ray emission. The image appears on the Preview Screen of the Panoramic Acquisition Window. When the acquisition ends, the Panoramic Acquisition Window disappears and the acquired image is automatically transferred to the Imaging Window.

4. Check the image quality.

5. To acquire a TMJ x4 image, on the Control Panel, click to reset the unit rotative arm.

6. From the Panoramic Acquisition Window, in the Program pane, select the TMJ and click x4.
7. Ask the patient to stay in the same position and open the mouth. Acquire an image with the mouth open.

8. Do the following when the acquisition is finished:
   - Open the temple supports and release the patient.
   - Clean the chin rest with a medical-grade 76% alcohol disinfectant for the next patient.
   - Reset the unit rotative arm for the next acquisition.
X-Ray Dose Emission Information

Compliance with EURATOM 97/43 Directive

You can right-click on each image to display the estimated emitted dose received by the patient. You can use this information to calculate the effective dose received by the patient for the image.

The radiation emission dose is expressed in mGy.cm². This dose is measured at the primary collimator outlet. The dose is accurate to +/−30%. The primary slot is 0.5 mm wide and 18.2 mm high.
Chapter 6
MAINTENANCE

This section describes the maintenance tasks that you need to perform regularly for your KODAK 8000 digital panoramic unit and the accessories.

**WARNING**

Switch off the unit, then, clean all accessible parts of the machine with an alcohol-based non-corrosive product. Avoid using liquids inside the unit. Follow the alcohol-based product manufacturer recommendations for safety precautions.

**CAUTION**

You can use the usual disinfectant products, but we recommend that you protect the unit from contamination by using barriers available from dental distributors. Follow the disinfectant product manufacturer recommendations for safety precautions.

### Daily

Carry out the following maintenance tasks:

**Table 6–1 Daily Maintenance Tasks**

<table>
<thead>
<tr>
<th>Accessories</th>
<th>Maintenance Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bite blocks</td>
<td>Sterilize with cold sterilization or autoclave up to 134°C before the next patient is x-rayed.</td>
</tr>
<tr>
<td>Edentulous bite block</td>
<td>Sterilize with cold sterilization or autoclave up to 134°C before the next patient is x-rayed.</td>
</tr>
<tr>
<td>Temple supports</td>
<td>Clean with medical-grade 76% alcohol disinfectant before the next patient is x-rayed.</td>
</tr>
<tr>
<td>Chin rest</td>
<td></td>
</tr>
<tr>
<td>All components that come into contact with the patient and the operator</td>
<td>Clean all components with medical-grade 76% alcohol disinfectant before the next patient is x-rayed.</td>
</tr>
<tr>
<td>Outer covers of the unit</td>
<td>Wipe the unit with a soft and dry cloth at the end of each day’s operation.</td>
</tr>
</tbody>
</table>

**WARNING**

Do not use detergents or solvents to clean the outer covers of the unit.

### Annually

We recommend a general inspection of the unit carried out by an authorized service technician.
Chapter 7
TROUBLESHOOTING

Information Messages
Occasionally, malfunctions can occur during use in the event of an incorrect action. An information (I) error code is displayed on the Display Screen of the unit Control Panel and the message is displayed on the popup on the Acquisition Window System Status Screen. In some cases, an audible warning is also issued.

The following table lists the information messages, their description and the action to take:

IMPORTANT
If an "E" message is displayed, the malfunction persists or more serious conditions occur, contact a qualified technician. When you call the qualified technician have the following information ready:

- Model Number: KODAK 8000
- Error Code Number: E xxx
- Message displayed on the popup on the Acquisition Window.

Table 7–1 Error Message

Quick Troubleshooting

Before any troubleshooting, make sure that the unit and the KODAK dental imaging software are correctly installed and are connected.

You can rectify the following malfunctions, using the procedures in the action column of Table 8-2, without any specific technical knowledge.

Table 7–3 Quick Troubleshooting

<table>
<thead>
<tr>
<th>Description of the Malfunction</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>When you click <img src="imaging_window.png" alt="Image" /> in the Imaging Window, the Panoramic Acquisition Window is not displayed.</td>
<td>1. Check that the unit is switched on.</td>
</tr>
<tr>
<td></td>
<td>2. Check that the unit and the PC are connected.</td>
</tr>
<tr>
<td>There is no movement when the exposure button of the x-ray remote control is pressed.</td>
<td>1. Check that the “Ready” message is displayed on the Display Screen of the Control Panel.</td>
</tr>
<tr>
<td></td>
<td>2. Check that the unit is in cooling mode. Wait for the Generator Cooling indicator to display 0.</td>
</tr>
<tr>
<td></td>
<td>3. Check that the unit is in the thermal overload mode. Wait until the <img src="generator_cooling.png" alt="Image" /> changes to green.</td>
</tr>
<tr>
<td>No image appears on the screen of the Panoramic Acquisition Window after the acquisition has been launched.</td>
<td>Check that the x-ray emission is not deactivated for demo mode.</td>
</tr>
<tr>
<td>The acquired image contrast is satisfactory but there are dark vertical strips on the image.</td>
<td>1. Check that the Patient’s shoulders are not slowing down the progress of the rotative arm. In this case, the rotation movement is slowed down resulting in the over exposure of the image in certain areas.</td>
</tr>
<tr>
<td></td>
<td>2. Position the patient correctly.</td>
</tr>
<tr>
<td>The image is too dark.</td>
<td>Reduce the x-ray dose by reducing the kV and mA in the Parameter pane.</td>
</tr>
<tr>
<td>The image is too light.</td>
<td>Increase the x-ray dose by increasing the kV and mA in the Parameter pane.</td>
</tr>
</tbody>
