

# Kodak WinOMS CS

## Point-of-Care Module

The Kodak WinOMS CS point-of-care module is designed to take your practice to a new level of efficiency and communication with your patients. By leveraging the tablet PC's mobility and stylus driven input method, the point-of-care module delivers critical patient data anytime, anywhere – even chairside.

Access to information when you need it most.

Our point-of-care module puts important patient information in the palm of your hand when you need it the most. While chairside, you can have instant access to each patient's treatment history, images, and x-ray images without ever pulling a chart.

# Efficient. Comprehensive. Flexible.

## Designed for the way you practice.

The point-of-care module is adaptable to the way doctors and their staff interact with patients. It can be utilized on desktop computers or tablet PCs to give you even greater flexibility. So whether you're at the frontdesk or in an exam room, you can take advantage of the benefits our point-of-care module has to offer.

### Streamlined office workflow

By utilizing our point-of-care module, you can post diagnosis and procedure codes, write prescriptions or generate correspondence to referring colleagues – without ever leaving the exam room. By the time the patient is ready to check out, their walk-out statement, prescriptions and insurance forms have been generated. Also, a letter to the referring physician is ready to print and mail.

### Less paper, better care

By helping eliminate excess paperwork, our point-of-care module enables more chair time with your patients. Plus, imagine being able to hand a patient your tablet PC with a copy of their panoramic x-ray image, so you can clearly explain treatment needs and options. Your patients will appreciate the improved communication and patient/doctor interaction.

### Complete and easily accessible information

With our point-of-care module, you can access a patient's full history and stored images without ever pulling a chart. This means you can focus on your patient instead of flipping through a paper chart to find the information you need.

### Commitment to service and support

We're committed to providing the guidance and support you need to get started – every step of the way.
