Sirona CEREC® Bluecam

The new CEREC® AC with the CEREC® Bluecam captures highly detailed images using a powerful blue light-emitting diode (LED). Rapid, easy imaging results in a quantum leap in CAD/CAM precision, clinical reliability and efficiency. The high-precision lens system of the CEREC® Bluecam sets a new standard in measurement accuracy and delivers an unprecedented level of precision. The high-performance diode emits blue light with a short wavelength. The resulting optical impressions are extremely accurate. This applies to single-tooth as well as multiple images. For more information please visit: www.sirona.com

SmartClip™ SL3 Self-Ligating Appliance System

SmartClip™ SL3 Self-Ligating Brackets are the modern choice in orthodontics. They're computer designed and the ligating mechanism uses a special nickel-titanium metal alloy to make your patient treatment more comfortable, time-saving and give your patients the result they want...a beautiful now smile.

Based on clinical feedback, 3M Unitek has combined advanced materials engineering with sophisticated mechanical design to develop an even more effective self-ligating bracket system and has improved the unique self-ligating clip mechanism. The SmartClip™ SL3 Self-Ligating Appliance System now uses less force to give your patients more to smile about.

Self-Ligating Appliances Clarity™ SL Self-Ligating Appliance System

At every stage, from patient consultation on through to debonding, Clarity™ SL Self-Ligating Brackets are designed to empower you and your staff. Clarity™ SL brackets combine the benefits of passive self-ligation, true twin design and hallmark Clarity™ bracket esthetics to efficiently deliver the results you and your patients expect.

Treatment starts with patient acceptance. That's why the Clarity™ SL Self-Ligating Appliance is designed to help you tap important patient interests such as esthetic treatment and convenience without giving up what you want: an appliance that delivers results.

KODAK CR 7400 System

Our innovative friction-free process extends the life of the plates and reduces artifacts. Convenient light protection pouches help reduce image degradation. With this innovative computed radiography (CR) system, you can capture images on phosphor plates, digitize and then store them for easy access and sharing. And, because the workflow is similar to that of traditional film, you can make the transition to digital radiography with minimal disruption to your practice. Improvements to the KODAK CR 7400 Digital Radiography System include:

- Enhanced image quality
- Advanced stability and reliability
- Easier, automatic installation
- New, modern design

The OrthoLase® diode laser. Completely personalized for Orthodontists

The OrthoLase® is the first diode laser specifically designed for Orthodontists. Using pre-programmed settings such as "Bicuspid Exposure," the doctor can immediately uncover a tooth that would otherwise have taken months to expose. With the OrthoLase®, getting better bracket placement is now a breeze. Procedures are now quick and simple using topical anesthetic, with no bleeding, recession, swelling or pain.

For further information or to purchase, call 800.217.8822.
