Latest Innovations from Carestream Dental Help Doctors See the Full Story, Change Lives

COLOGNE, Germany—What's the story behind the smile? A challenge accepted, an obstacle overcome, a workflow streamlined and a life significantly changed. At the International Dental Show 2019, Carestream Dental is showcasing the latest advancements in technology and the international dental healthcare professionals who make it possible to change patients' lives.

To give attendees the full story of "what's behind the smile," Carestream Dental is hosting a series of live presentations in Booth T40 - U49, Hall 10.2, from Wednesday, March 13 through Saturday, March 16. More than 20 experts from various dental specialties are sharing their personal experiences of challenging cases and how digital technology helped them find the best outcomes. Between presentations, attendees are invited to explore the newest products and technology from Carestream Dental, from software to equipment.

Attendees at IDS 2019 will experience the exciting pre-launch of the CS ScanFlow¹ software platform that will completely redefine Carestream Dental's intraoral scanning portfolio. CS ScanFlow will provide ultimate versatility, flexibility and scalability to users through a new workflow design. Users will be able to navigate freely among different workflows from a single scan and process datasets quickly and more accurately. A simplified user interface developed for touchscreen navigation allows users to enjoy a more direct and intuitive interaction with the software if desired. Additionally, the new software will provide mesh refinement options such as the addition of a base for printing and model cleaning tools; will allow for one-click export directly from the software; and will enhance the capture of challenging data with Hybrid Scanning restorative and implant-borne restorative workflows, to name just a few capabilities. As a bonus, current CS 3600 intraoral scanner users who are enrolled in CS Advantage will enjoy a complimentary upgrade to the new platform.

Additionally, CS Model+, Carestream Dental's modeling software that automatically segments, setups, analyzes and presents digital models, has been updated to further redefine the orthodontic workflow. Now, CS Model+ version 3.0¹ features, among other things, semi-automatic margin detection that eliminates the need to manually segment unidentified teeth. The update also includes new and improved setup options for both manual and aligner modes that save time and a completely redesigned manual mode that provides even more options for refinement.

Carestream Dental is also providing IDS 2019 attendees an exclusive preview of the newest addition to its intraoral scanning portfolio, which includes the CS 3600 and CS 3600 Access: The CS 3700.¹ Prestigiously designed in collaboration with Studio F. A. Porsche, the CS 3700 features the ergonomic curves and sleek style expected of a high-performance intraoral scanner. The new premium scanner will be available in Arctic White and Carbon Grey, so doctors can match the aesthetics of their practice. Advanced software with features exclusive to the CS 3700—such as smart shade matching that will provide automatic selection and recording of the patient's tooth shade—will fuel the scanner's high performance, allowing users to choose their own path. Ultimately, the scanner's advanced design will drive better clinical outcomes.

The CS 9600, Carestream Dental's newest CBCT system that is so smart, yet so simple, also features prominently in the booth. This five-in-one unit combines 2D panoramic imaging, CBCT scanning, 3D model/impression scanning and 3D facial scanning, and can also be upgraded to include cephalometric imaging,² and is available in three editions featuring multiple fields of view. Intelligent features and advanced software algorithms make capturing highly accurate images on the first try easier and more efficient. The CS 9600 is available with CS Advantage, a robust service package that includes the exclusive CS UpStream program. CS UpStream monitors the system's operations to prevent downtime and maximize system availability.

"Over the course of five busy and exciting days, attendees will experience our newest innovations," Ed Shellard, D.M.D, chief dental officer, Carestream Dental, said. "However, as they learn more about this new technology we want them to be thinking in terms of future smiles and lives changed, not circuit boards and metal. After all, the devices themselves would be nothing without the passionate dental professionals who dedicate their careers to their patients."

The International Dental Show takes place in Cologne, Germany, from March 12-16. To experience the live lecture series, get exclusive previews of products and explore Carestream Dental's latest innovations, stop by Hall 10.2, Booth T40 - U49, or visit carestreamdental.com/IDS.
